

## Middleport Pottery, Burslem, Stoke-on-Trent

Ian Clark Restoration was commissioned to produce a consultative document based on a specific project requirement to carry out an on-site audit of the engineering heritage assets within Middleport Pottery with a view to assessing their contextual, technological and cultural significance to this historic site. It needed to evaluate their retention as part of the commercial manufacturing operation or their future sensitive integration as an integral strand of a visitor interpretation heritage trail or architectural enhancement.

The document identified machinery and associated technological infrastructure which forms the project engineering heritage asset register together with a statement of their basic core condition and case specific observations and recommendations for their future preservation.

The findings and recommendations of this report were used as supporting documentation in conjunction with the project consultancy and conservation strategies being developed by Fielden Clegg Bradley Studios, Lead Architects for the Middleport Pottery Project.

### Client Testimonial

“On the Middleport Pottery project Ian Clark has demonstrated great strengths in both theory and application during the design stages. His passionate and pragmatic contribution has surpassed high expectations”.
