

The Royal Navy Submarine Museum

Since 1998 Ian Clark Restoration has supplied practical collection care and specialist maritime conservation consultancy solutions for The Royal Navy Submarine Museum.

Supplying a flexible and uniquely structured service combining engineering and maritime conservation, ICR has completed a series of prestigious contracts including Holland 1, HMS Alliance, X-24 midget submarine, Biber 105, LR3 submersible and E17 conning tower

In addition to working on large capital projects ICR has supplied a specialist consultancy service including fund raising condition surveys, feasibility studies and technical support as well as object conservation within the gallery collections.

Client Testimonial

If time, cost and quality are key requirements of any conservation project then Ian Clark scores exceptionally highly in all three areas. Over the past decade Ian has undertaken a number of important conservation tasks for the Museum and has always delivered excellent work which given how specialised industrial conservation is have in my opinion been very good value for money. Most notably Ian worked on the conservation of historic submarine *Holland 1* launched in 1901: the project went to win the 2002 Pilgrim Conservation Award.
